**Large-Scale Operations Management Test of Use of the White Amur for Control of Problem Aquatic Plants; Selected Life History Information of Animal Species on Lake Conway, Florida**

This report summarizes, in tabular form, life history information for animal species identified at Lake Conway, Orlando, Fla. A total of 180 animal species were sighted or collected on Lake Conway during the period January 1976 through September 1977. This period coincides with the baseline period of the Lake Conway Large-Scale Operations Management Test to document the effects of the introduction of the white amur fish for control of the problem aquatic plant hydrilla. Information developed in this report will (Continued)
20. ABSTRACT (Continued).

be used for subsequent analysis of the effects of the white amur on the Lake Conway ecosystem.
Preface

The work described in this volume was performed by the Aquatic Plant Control Research Program (APCRP) of the U. S. Army Engineer Waterways Experiment Station (WES), Vicksburg, Miss. The work was sponsored by the U. S. Army Engineer District, Jacksonville, and by the Office, Chief of Engineers, U. S. Army.

This report summarizes life history and fish and wildlife management information for animal species identified from Lake Conway, Orlando, Fla. Contractors performing field research for the Lake Conway Large-Scale Operations Management Test (LSOMT) either sampled or sighted 180 species during the period January 1976 through September 1977. This period coincides with the baseline period of the LSOMT. Information developed in this report will be used to document changes to the Lake Conway ecosystem as a result of the introduction of the white amur fish to control the nuisance aquatic plant hydri11a.

Life history and management information was collected and organized by Ms. Nancy J. Zittleman of the WES Environmental Laboratory (EL); the final report was written by Messrs. Randall R. Williams and Eugene G. Buglewicz, EL. The authors wish to acknowledge the efforts of the various scientists who were involved with the collection and identification of these organisms, and the assistance of Ms. Mary C. Landin, Environmental Resources Division, EL, who provided information on the location of avifauna nesting locations.

The work was monitored at WES in the Waterway Habitat and Monitoring Group (WHMG) by Messrs. John D. Lunz and Eugene G. Buglewicz, Principal Investigators for the LSOMT, and Dr. Thomas D. Wright, Chief, WHMG, and was under the general supervision of Mr. Bob O. Benn, Chief, Environmental Systems Division (ESD). Mr. J. Lewis Decell was Program Manager of the APCRP. The ESD and APCRP are a part of the EL, Dr. John Harrison, Chief.
Commanders and Directors of WES during the period were COL Nelson P. Conover, CE, and COL Tilford C. Creel, CE. Technical Director was Mr. F. R. Brown.

This report should be cited as follows:

<td>metres</td>
</tr>
</tbody>
</table>

* To obtain Celsius (C) temperature readings from Fahrenheit (F) readings, use the following formula: \( C = \frac{5}{9}(F - 32) \). To obtain Kelvin (K) readings, use \( K = \frac{5}{9}(F - 32) + 273.15 \).
LARGE-SCALE OPERATIONS MANAGEMENT TEST OF USE OF THE WHITE AMUR FOR CONTROL OF PROBLEM AQUATIC PLANTS

Selected Life History Information of Animal Species on Lake Conway, Florida

Introduction

Background

1. The Lake Conway Large-Scale Operations Management Test (LSOMT) is a 5-year field research effort to describe the ability of the white amur (Ctenopharyngodon idella), a herbivorous fish, to control the nuisance aquatic plant hydrilla and to document the ecological consequences introduction of this exotic species will have on the lake's ecosystem.

2. To differentiate between the effects of the white amur and other natural or man-made events that occur in the Lake Conway study area, an investigation entitled "A Characterization of Cultural Development Around Lake Conway Affecting the Large-Scale Operation Management Test," was initiated during 1979 to document those environmental alterations occurring at Lake Conway that could be attributed to the white amur but could actually be caused by human activities in the lake basin. These activities may include, for example, elimination of littoral vegetation through the construction of sand beaches or home building activities, increased urbanization in the lake watershed area, and stormwater diversion.

Purpose

3. The purpose of this report is to summarize, in tabular form, key life history and general fish and wildlife management information on animal species inhabiting the Lake Conway study area. Information here-in concentrates on those aspects of habitat that are required by the organisms for normal feeding, resting, and reproduction or nesting cover.
This information will be used to summarize habitat features in the previously described investigation and to provide a data base for the final analysis of the LSOMT research results.

Methods

4. A species list of 180 mammals, birds, fish, and herpetofauna was obtained from the LSOMT baseline data contractor reports which covered the period January 1976 through September 1977. A search of applicable data bases and literature sources for selected life history information was made and tabulated for each organism.

5. Tabulation of data includes the following information: common name; legal status; commercial or recreational value; management potential; sensitivity to human disturbance; food preferences; feeding habitat; reproductive habitat; and resting habitat.

6. Appendix A lists the species into appropriate categories of fish, birds, mammals, and herpetofauna. Each species is assigned a "species number" which should be used when interpreting Appendix C.

7. Appendix B tabulates the following information for each Lake Conway species: "a" lists the common name; "b" states whether or not the species is described on Federal or State threatened or endangered species list; "c" notes whether the species has commercial or recreational value on Lake Conway; "d" is a judgment statement as to whether or not the species is amenable to population control through intensive management practices; "e" states whether or not the species is sensitive to human disturbance; "f" lists food preferences; "g" provides a summary statement of the type of habitat required for feeding; "h" summarizes reproductive habitat requirements; and "i" provides habitat information not covered in items "f" through "h," and/or describes the type of habitat required for resting. For those instances where life history or management data are not available, blanks occur after the appropriate letter.

8. Appendix C summarizes the feeding, resting, and nesting preferences or reproductive habitat requirements for each organism.

9. The Bibliography section lists pertinent literature used to obtain information for this report.

| 15 (Continued)  | *Nycticorax* nycticorax | f. Fish, crayfish, aquatic insects, and frogs. Also an aerial predator of other colonial waterbirds and their eggs.  
g. Requires shallow water in which to feed.  
h. A year-round resident in central Florida and breeds there. Nests are built in shrub forest, shrub thicket, or forest although herb shrub and dense herb are used. Occasionally nests are found on the ground. Nests are built beneath the canopy. Will nest far from water in tall trees or practically on the ground in matted reeds; very adaptable.  
i. Sleeps all day in treetop roosts. Most commonly found in areas with extensive marshes (fresh or salt) but after breeding season can be found on almost any small lake or pond. |
| 16              | *Eudocimus albus* | a. White ibis.  
b. Not on Federal or State threatened or endangered lists, but is of special concern. Protected by the Federal Migratory Bird Treaty.  
c. Not recreational or commercial  
d. Population could be increased  
e. Very sensitive to human disturbance; rookeries have been abandoned after one or two visits by bird students.  
f. Fiddler crabs, snakes, crayfish, and many kinds of insects.  
g. Favorite feeding grounds are shallow water of marshy areas, wet fields, and tidal flats. |

h. A year-round resident of central Florida and breeds there. Preferred nest site is the upper branches of a stand of giant swamp trees. Also makes use of shallow water trees such as mangrove and willow.

i. Inhabits low, wet country where vast swamps alternate with open, marshy meadows and shallow muddy ponds. After feeding likes to sit in the top of a dead tree to sun and digest.

| 5                       | *Chelydra serpentina* | a. Common snapping turtle  
b. Not on State or Federal threatened or endangered lists  
c. Not recreational or commercial  
d. Population could be increased  
e. Not sensitive  
f. Omnivorous; feeds on fish, carrion, and vegetable matter  
g. Young feed on and among aquatic plants  
h. Seldom leaves water except to lay eggs. Nests are made in loose, well-drained soil, usually within 38-141 m of water in Florida  
i. Occurs in aquatic habitats ranging from small farm ponds and creeks to large lakes and rivers. Found with notable frequency in bodies of water with soft, muddy banks or bottom to burrow in. Seldom basks, but hides in dense aquatic vegetation, masses of roots, holes, or submerged objects in water. Aquatic vegetation is extremely important to young for support because swimming ability in individuals younger than 4 or 5 months is limited and without support drowning occurs. Hibernation takes place on the bottom of waterways under mud or vegetable debris |

In accordance with letter from DAEN-RDC, DAEN-ASI dated 22 July 1977, Subject: Facsimile Catalog Cards for Laboratory Technical Publications, a facsimile catalog card in Library of Congress MARC format is reproduced below.

Zittleman, Nancy J.
Large-scale operations management test of use of the white amur for control of problem aquatic plants: selected life history information of animal species on Lake Conway, Florida / by Nancy J. Zittleman, Randall R. Williams, Eugene G. Buglewicz (Environmental Laboratory, U.S. Army Engineer Waterways Experiment Station). -- Vicksburg, Miss. : The Station ; Springfield, Va. : available from NTIS, 1982.
101 p. in various pagings ; 27 cm. -- (Miscellaneous paper ; A-82-5)
Cover title.
"August 1982."
Final report.
"Prepared for U.S. Army Engineer District, Jacksonville and Office, Chief of Engineers, U.S. Army."
